Your product, designed for people

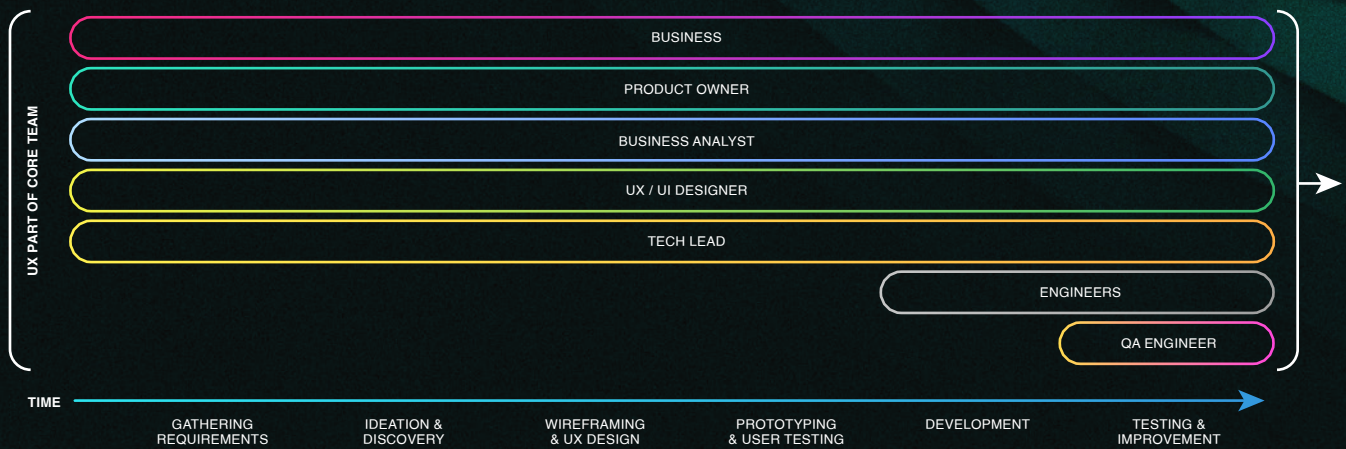

BBD's end-to-end creative competency geared at crafting memorable human-centric user experiences (UX) and user interfaces (UI).

Based on extensive user research, proven human-centric design principles and your intended customer experience in line with your overall brand and key objectives, we craft and develop meaningful UX and UI to offer additional value to your business. Taking your application from initial idea to final launch, we ensure the best digital experience for your customers as your end-to-end software partner. We become fully entrenched in your environment, brand, end users and unique needs to mould powerful solutions while working closely with you.

We leverage strong collaboration between all technical stakeholders, including our highly skilled development, testing and UX/UI teams to ensure your application is seamless and functional, as well as aesthetically appealing and usable. In this way, BBD offers the creative capability to see your application to end user engagement.

What we do

While processes and desired customer experiences differ from project to project, we endeavour to include the following steps and stakeholders to ensure the best possible outcome for your users.

How we add value

Gather and visualise requirements

Collaboration on the UX journey starts with us working with you to identify and understand your objectives, gathering requirements as we go.

Discovery and ideation

Once requirements are clearly set out based on your business needs, we generate ideas, translating them into solutions that form the foundational concept on which to base the journey through the product.

User research

To ensure the best experience for users, we conduct extensive research and interviews to build a solid foundation from which to work. This includes creating user personas, identifying habits, dislikes, values and behaviours.

Wireframing

We begin to lay out designs with the platform and process in mind (mobile, web or responsive to both) and how this fits into the bigger picture of your business goals, building out projected costs for development.

UI design

In this phase, we create the design systems by placing buttons, defining colours and other interactive objects that shape the overall emotive look and feel of the page.

Building a prototype

With design systems and journeys defined, we use high fidelity screens to put together interactive demos.

User testing

Using defined business requirements, we develop a set of testing goals which are then assessed through various methods including ease of use, overall experience and perceptions, and A/B testing.

Quality assurance

After development cycles have concluded, a final quality check is conducted by designers, engineers, testers and quality assurance to refine, test and finalise implementation of the UI elements into the end product before moving it into production.

Intuitive UX/UI solutions that deliver the right information at the right time to your users.

| The benefits for your business

A one-stop shop

- A single partner to see your project from start to finish
- Highly collaborative across our team and yours
- Early alignment with technical engineering ensures project viability
- Systems are both functional and aesthetic

Cost and time efficiency

- Reducing third party involvement to enable ultimate cost savings
- Lifecycle through development to launch is streamlined
- Reduced time to development and go-live
- Reduced training costs through intuitive UX/UI

Bringing your vision to life

- Throughout the process, your strategic objectives and end users are our True North
- We work to fully align ourselves with your brand vision and needs

Quality assured

- All designs are based on the foundations of solid research
- Multiple quality checks are conducted by users and development teams alike
- Multiple feedback sessions are offered to ensure a refined and quality system
- Crafted around human-centric design principles to ensure product delights and drives high end user engagement

Get in touch

If you're looking to delight your end user and drive high engagement with truly meaningful UX/UI solutions crafted around human-centric design principles, reach out to us.
