

Your cloud solution partner

As a cloud enabler, BBD aims to accelerate your business through services that take advantage of the increased agility, functionality, security, scalability and business continuity that the cloud offers.

As a Microsoft Azure Gold Certified Partner, AWS Advanced Consulting, Well-Architected and a CloudFront Global Content Delivery Network Partner, BBD is cloud agnostic. This means that we assess the requirements around each business environment and establish which solutions would be best suited, rather than trying to fit the environment to a packaged solution.

We don't resell cloud services, we shape business in the cloud.

Migration / Rehost

We can immediately start leveraging the agility and scale of the cloud by migrating existing applications. This lift-and-shift technique can be for either a part or a whole application and can be completed with minimal application disruption.

Already in the cloud? We can seamlessly move your current workload to a newer, more optimally placed region or a different public cloud provider altogether.

Replatform

Without changing the core architecture of an application, we are able to make cloud-centric optimisations to capitalise on the operational cost savings while migrating it to the cloud. These optimisations also work as application improvements.

Rearchitect

By redesigning legacy applications as cloud native, they inherit cloud characteristics that quickly makes them highly available, highly-scalable and cost-effective. This more complex service allows an organisation to more easily add capacity and manage service costs.

Managed cloud service

Run by a dedicated unit within BBD, our managed cloud services unit assists with the management of your workload components, specifically within AWS environments, ensuring your cloud setup is optimised and cost effective. We manage the cloud for all types of businesses, ranging from small operations to large enterprises. Realised as three distinct packages, these services are available for every kind of cloud environment with every kind of budget.
